### **Cal OES COASTAL REGION**

#### **Upright Train Derailment, Crockett, Contra Costa County, SPILL: 16-7211**

On 12/01/16 at 0547 hours the California State Warning Center (CSWC) received a report from Union Pacific Railroad (UPRR) advising that a single tank car derailed upright at the Nu Star Energy Facility in Crockett, Contra Costa County.

- The tank car was unloaded and last contained Denatured Ethanol; only residual amounts of the ethanol remained in the tank at the time of derailment.
- There were no reported injuries and no release of hazardous materials.
- The CSWC made all appropriate notifications per Hazardous Materials SOP.

# WEATHER OF CONCERN

## Weather of Concern

- Southern California: A strong and potentially damaging wind event is expected for portions of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties late tonight through Saturday afternoon. Gusty northeast winds will likely develop early this evening and strengthen overnight. Winds should peak in strength Friday and Friday night before slowly diminishing through the day on Saturday. With this event, strong and damaging winds are likely in many areas not usually impacted by strong offshore winds. Potential impacts for the area include: downed power lines and trees, hazardous driving conditions for high profile vehicles, and possible critical fire weather conditions.

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

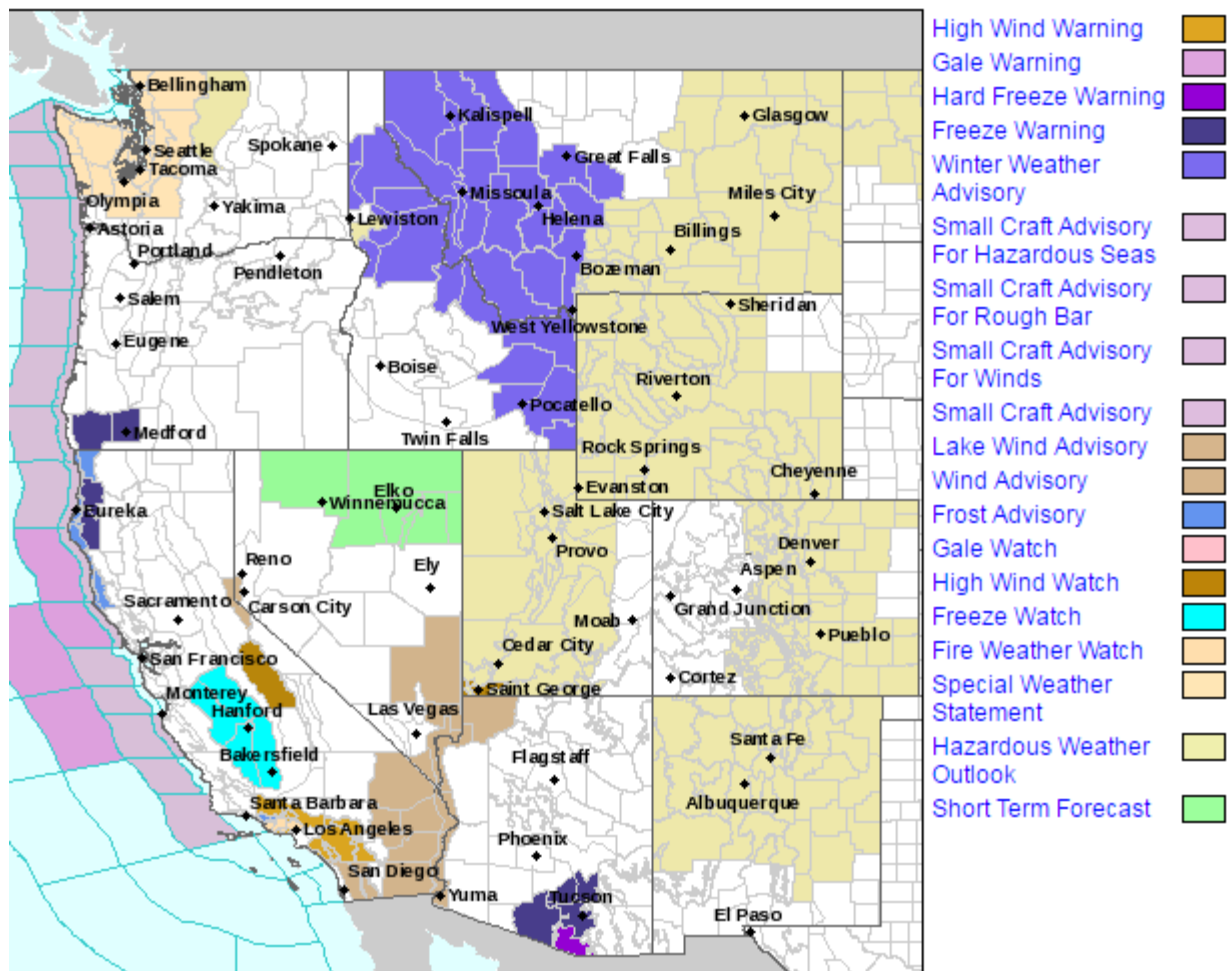

A couple of minor weather systems will keep an unsettled weather pattern going over the region through the weekend. High pressure with dry, seasonably mild weather will be over the region today through Saturday, although some high clouds are likely to be seen in that pattern as well. Two more weather systems similar to today's are expected to drop south across the region Sunday and Monday with most of their precipitation likely to be in the northern half of the region and eastern mountains again. Next Tuesday looks dry again before another possible weather system arrives next Wednesday for at the northern areas. The lowest snow levels over the next week will most likely be around 2500-3000 feet in the north and around 3500-4000 feet in the south Sunday and Monday. Some breezy north to east winds are expected to develop and last into tomorrow morning for the Sacramento Valley, surrounding foothills and the slopes/drainages west of the Cascade/northern Sierra crest. Lighter north to east winds are expected to prevail elsewhere at that time and in all areas tomorrow and Saturday. Westerly winds will return after that. Temperatures will be around seasonably cool values for the most part over the next 2 days, and Saturday will likely be the mildest day with many areas 5-8 degrees above normal. That will put the warmest inland locations into the lower 60s Saturday.

## **SOUTHERN CALIFORNIA**

A trough will drop south from Canada today and tomorrow bringing cooler temperatures both days. Temperatures will be around 10 degrees below normal by tomorrow. Minimum humidity will be above 20% through today and then drop to 15% to 30% tomorrow. A ridge of high pressure will bring warmer temperatures along with minimum humidity in the single digits and teens away from the Central Valley and its surrounding foothills this weekend. North to northeast winds of 20 to 40 mph with gusts to 60 mph will surface across much of Southern California tomorrow morning through Saturday evening. A trough will move inland over the Pacific Northwest bringing significant cooling early next week. Scattered showers with light rainfall totals and low snow levels will be possible across portions of the area early next week. There will be strong west to northwest winds over the wind prone mountain and desert areas Sunday night through Monday night.
